

Changing Location Settings - Apple

The Trucker Tools driver app allows drivers to consistently track loads, from beginning to end. We will not store your location data unless you are currently tracking a load. To ensure tracking is successful, follow the steps below.

1 Select the Notification

If your location settings are not set correctly, the Trucker Tools app will display a red banner at the top prompting you to change your settings to *Always Allow*.

2 Enable Location

Once the notification has been selected, the Trucker Tools app will display a screen to enable location and notifications. Select *Enable* on location.

Trucker Tools requires these permissions for tracking

Location

Trucker Tools requires that your location permission is set to Always Allow to ensure accurate tracking information. Trucker Tools will not use your location if you are not actively tracking a load or using our mobile app.

Enable

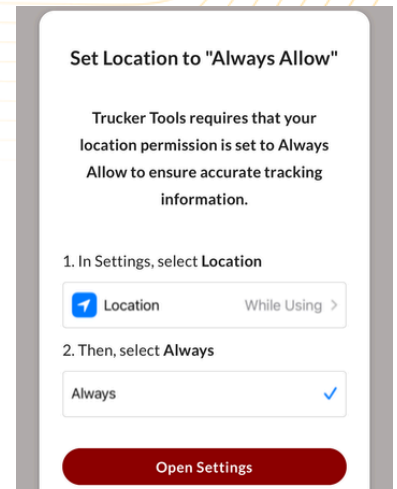

Notifications

Enable notifications for load updates and tracking reminders.

Enable

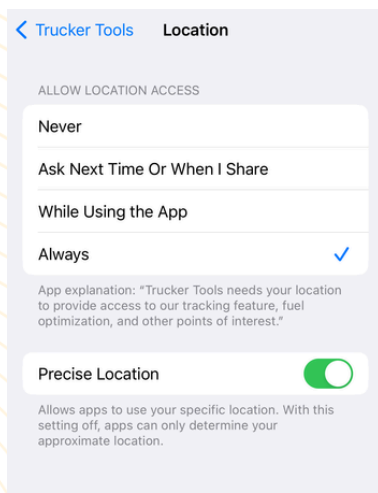

3 Select Open Settings

Next, a screen will display showing how location settings can be accessed. Select *Open Settings* to make the necessary adjustments and ensure tracking is on.

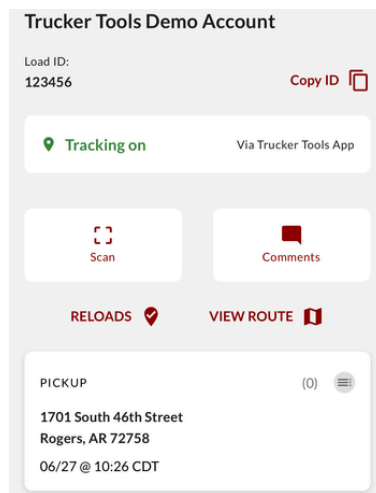

4 Select Always

In your phone settings, select *Always* under Allow Location Access. We recommend selecting *Precise Location* for a more accurate tracking experience.

5 Ensure Tracking On

Once your location settings are set correctly, the status will show *Tracking On* when you select *Start Track*.

6 Keep Tracking On

If you change your location settings at any point during transit, the red banner will appear in the app. Follow the steps to *Always Allow*.
