

LOAD TRACKING WILL AUTO START IF **ALL** OF THE FOLLOWING **3** EVENTS OCCUR

1

Driver has ended the load track on their previous load OR they are not currently tracking on a load

2

Driver opens the Trucker Tools app up to 24 hours prior to the scheduled pickup time

3

Driver has their device's location settings set to ALWAYS ALLOW

LOAD TRACKING **WILL NOT** AUTO START IF:

- Driver is still tracking on a previous load
- Driver has not opened the Trucker Tools app on their device
- A possible TMS specific customization for tracking start time.
 - Example: If a start time customization of 2 hours exists instead of the default 24 hours, and if the driver opens the app more than 2 hours BEFORE the load is to be picked up, the load **WILL NOT** auto start. Auto start will occur if the driver opens the app at any time AFTER the 2 hour window.
- Driver does NOT have their location settings on their device to ALWAYS ALLOW
