How to track Omnitracs integrated carriers

Omnitracs requires a **vehicle ID** instead of a truck number to successfully initiate tracking. Omnitracs also does not permit access to the list of vehicle IDs for a carrier.

Please have the carrier follow the steps below on how to obtain their vehicle IDs.

Carrier obtains the vehicle ID for the load

The Vehicle ID is the highlighted value in the screenshots for each platform type below.

Enterprise Services – QTRACS system (IVG/MCP users)

Roadnet – Fleetview (Omnitracs/Roadnet Telematics, RDC, XRS Relay)

Trucker Tools Tip

Download a list of the vehicle IDs to share with brokers so they can easily reference the correct value for load tracking!

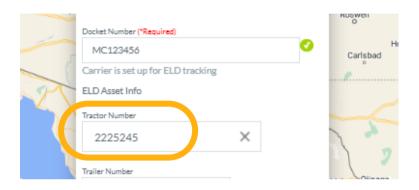

Need further assistance? We're here to help!

Contact our Trucker Tools Telematics team at eldsetup@truckertools.com or call 703-955-3560. Our team is available Monday through Friday 8:30am -5:00pm ET.

Input the vehicle ID in the truck number field

2 Replace the existing truck number either in your TMS or in the Load Track portal with the vehicle ID as provided to you by the carrier. Tracking will initiate within 10 - 15 minutes. If the vehicle ID is invalid, you'll receive an error that the asset ID is invalid.
